

Add a property for specifying authentication scheme for introspection endpoint

#17036

Contributor

Once [this](#) is done, Spring Security will support both basic and bearer token authentication for the token introspection endpoint. The client-id and client-secret properties will remain the same but we will need to add a property to allow the user to specify if they want basic authentication of bearer token authentication via the client credentials grant type.

mbhave added this to the 2.2.x milestone on 1 Jun 2019
